

WORKSHEET REVISION-1

LEVEL-7

SUBJECT: CHEMISTRY

TOPIC: REACTION OF METALS

Fill up the blanks:

1. Metals react with sulphur to form compound called _____
2. Gold and silver are found in the rocks as _____
3. Obtaining a metal from its ore is called _____
4. Compounds of metals found in nature are called _____
5. _____ of scrap metals will help to save valuable resources.

Define the following:

1. **Corrosion :**

2. **Unreactive metals:**

3. **Ores:**

Name the following:

1. Bauxite is an example of.

Ans:

2. The most abundant metal in the earth's crust.

Ans:

3. Name the process by which oxygen is removed from the iron ore.

Ans:

4. Aluminum is extracted by a method called.

Ans _____
_____.

Question and Answers:

1. Write four properties of metals:

_____.

2. Describe how iron is extracted from hematite.

_____.

3.Explain how sacrificial protection works.
