## Al Moattassem International School - Jubail

Revision 3 - chapter 12 - Volume \& Surface Area

## Part 1

Fill in the Blanks:
1.Volume of Prism = $\qquad$
2. Volume of Pyramid $=\ldots \quad \times$ Volume of corresponding prism
3. Total Surface Area of Pyramid $=$ $\qquad$
4. Volume of Sphere $=2 / 3 x$ $\qquad$

## Part 2

## Solve the Following:

1. A Pyramid has a square base of length 12 m . Given that the slant height of the Pyramid is 15 m , draw its net and hence find its total surface area.
2. $O A B C$ is a triangular pyramid with a base area of $15 \mathrm{~cm}^{2}$ and a height of 4 cm . Find the volume of the triangular pyramid.
3.A Cone has a circular base of radius 8 cm and a height of 17 cm . Find the volume of the cone.
3. A Cone has a circular base of radius 9 cm and a slant height of 5 cm . Find the total Surface Area of the Cone.
4. Find the volume of each of the Sphere with the radius of 8 cm.
5. Find the surface area of each of the Sphere with the radius of 12 cm .
6. Find the Total Surface Area of a hemisphere of radius 7 cm
(Take $\Pi=3.142$ )
7. A Solid consists of a cone and a hemisphere which share a common base. The Solid has a height of 50 cm and the hemisphere has a diameter of 30 cm .

Find
i) The volume
ii) Total Surface Area of the Solid.

| Shape | Surface Area Formula | Volume Formula |
| :---: | :---: | :---: |
| Cube | $S A=6 s^{2}$ <br> where $s=$ length of the side | $V=s^{3}$ <br> where $s=$ length of the side |
| Cuboid | $S A=2(l w+l h+w h)$ <br> where $I=$ length, $w=$ width, $h=$ height | $V=l w h$ <br> where $/=$ length, $w=$ width, $h=$ height |
| Prism | $S A=2 B+p h$ <br> where $B=$ area of base, $p=$ perimeter of base, $h=$ height | $V=B h$ <br> where $B=$ area of base, $h=$ height |
| Cylinder | $\begin{aligned} S A & =2 \pi r^{2}+2 \pi r h \\ \text { where } r & =\text { radius, } h=\text { height } \end{aligned}$ | $V=\pi r^{2} h$ where $r=$ radius, $h=$ height |
| Hollow Cylinder | $S A=2 \pi r h+2 \pi R h+2\left(\pi R^{2}-\pi r^{2}\right)$ <br> where $R=$ radius of the outer surface, $r=$ radius of the inner surface | $V=\pi R^{2} h-\pi r^{2} h$ <br> where $R=$ radius of the outer surface, $r$ $=$ radius of the inner surface |
| Cone | $S A=\pi r^{2}+\pi r s$ where $r=$ radius, $s=$ slant height | $V=\frac{1}{3} \pi r^{2} h$ <br> where $r=$ radius, $h=$ height |
| Pyramid | ```SA = area of base + area of each of the lateral faces Regular pyramid \(=\) area of base \(+\frac{1}{2} p s\) where \(p=\) perimeter of the base, \(s=\) slant height Square pyramid \(=b^{2}+2 b s\) where \(b=\) length of the base, \(s=\) slant height``` | $V=\frac{1}{3} B h$ <br> where $B=$ area of the base, $h=$ height |
| Sphere | $\begin{gathered} S A=4 \pi r^{2} \\ \text { where } r=\text { radius } \end{gathered}$ | $V=\frac{4}{3} \pi r^{3}$ <br> where $r=$ radius |
| Hemisphere | $\begin{gathered} S A=3 \pi r^{2} \\ \text { where } r=\text { radius } \end{gathered}$ | $V=\frac{2}{3} \pi r^{3}$ <br> where $r=$ radius |
